PROFILE

Lead Software Engineer with 4+ years building and running **real-time distributed systems** in production, specialised in Go, Java / Spring Boot, Angular, React / React Native and cloud (AWS, Kubernetes, Terraform). Dev Lead at GLS, now also part of **GLS France's AI platform team**.

PROFESSIONAL EXPERIENCE

Lead Software Engineer (Dev Lead) — GLS Oct 2025 - Present
General Logistics Systems · Toulouse, France · [Go](#) · [AWS](#) · [Microservices](#) · [Real-time](#) · [Terraform](#) · [Grafana](#)

- Support a 5-engineer team building a real-time microservices platform (Go, AWS) that integrates third-party lockers from multiple providers into GLS's Out-of-Home network (~350,000 parcels a day).
- Part of the small team building **GLS France's AI foundation** — a shared platform of skills, agents and AI tooling that assists developers, product owners and stakeholders day to day.
- Co-design the service architecture and AWS infrastructure with the solution architect and tech lead; primary engineering contact for external locker providers, aligning API contracts across companies.
- Own reliability and quality: Grafana observability for services and real-time event flows, AWS infrastructure as code (Terraform), CI/CD, and end-to-end and integration test suites in Java with Cucumber and Gherkin (BDD).
- Owned the notification overhaul: 2,000+ lines of legacy HTML email moved to MJML, campaign UI redesigned.

Full-Stack Software Engineer — Air France (via ASTEK Technology) Oct 2022 - Aug 2025
Air France Cargo · Toulouse, France · [Java](#) · [Spring Boot](#) · [Microservices](#) · [Azure](#) · [XML](#) / [XFWB](#)

- Built and maintained microservices for international customs freight declarations and compliance checks, handling complex business rules, error management and XML (XFWB) message flows.
- Implemented a **rule-based alert engine** that flags XML freight documents for manual review, set up traceability for automatic freight blockages, and helped migrate on-premises applications to Microsoft Azure.

PERSONAL PROJECTS

Asiganme — E-commerce marketplace for West Africa Mar 2024 - Present
Team of 3 engineers · [Spring Boot](#) · [Python](#) · [React Native](#) · [React](#) · [Elasticsearch](#) · [AWS](#)

- Microservices marketplace (Spring Boot / Java, Flask / Python) with a React Native buyer app, React web apps for sellers and staff, and mobile-money and card payments (Ecobank API, PayPal).
- Built the **AI layer**: natural-language product search and a conversational shopping assistant (Python + Elasticsearch), plus automated listing moderation; runs on AWS with Docker and Terraform.

Novi — Short-term lending app (installment credit) Apr 2025 - Present
Team of 3 engineers · [Spring Boot](#) · [Smile ID](#) · [AWS Textract](#) · [Stripe](#) · [Terraform](#)

- Spring Boot microservices for loans repaid over 3–4 monthly installments, with a **credit-scoring algorithm** that assesses solvency without a formal credit history.
- AI-driven KYC (Smile ID) and payslip analysis (AWS Textract); payments via Ecobank, Stripe and PayPal.

SKILLS

Languages & backend	Go, Java, Spring Boot (Cloud, Security), Python, Node.js, SQL, REST APIs
Frontend & mobile	Angular, React, React Native, TypeScript, JavaScript, Ionic, MJML
Cloud & DevOps	AWS, Azure, Kubernetes, Docker, Terraform (IaC), CI/CD (GitLab CI, GitHub Actions), Grafana
Architecture	Distributed systems, microservices, event-driven architecture, Apache Kafka, WebSocket
AI	LLM agents & skills, AI product search & assistants, KYC & document AI (Smile ID, AWS Textract)
Data & testing	PostgreSQL, MySQL, MongoDB, Oracle · BDD (Cucumber, Gherkin), JUnit, E2E & integration tests

EDUCATION

Engineering Degree in Computer Science — Polytech Nice Sophia 2019 - 2022
Diplôme d'Ingénieur, Master's level (CTI-accredited) · Université Côte d'Azur · Sophia Antipolis, France

Bachelor's Degree in Computer Science — Institut Africain d'Informatique 2017 - 2019

LANGUAGES Ewe (native) · French (bilingual) · English (professional working proficiency)
